[Talking] In the beginning was the word and the word was with Allah and the word was Allah, nothing would exist, if Allah did not create it nothing would exist, if Allah did not create Let's go back on a track and embark On a trip thru space to a time and place when everything was dark Afar from many star, remotely distant In the beginning when life was non-existent Allah created himself, Allah self-created all-knowledge before man first originated From the Son of Man, but he begotten out the sun For Allah is one, and besides him there is none But still it was dark, not a spark in the night So from the mind, he shined, and blind like a divine light And than in a cosmic burst, a star dispersed And first began to expand thru-out the universe So light was shred and spread to infinity And the stars, the sun and moon, would soon began to BE As planets evolved and revolved like satellites In orbit to absorb the rays of sunlight Rotating and spinning, beginning to take form Until gradually, the galaxy was born Than Allah gave birth, to the planet Earth The land, The Heavens and the seven seas And made it one of the nine planets to circle the sun As it spun, at 360 degrees Than clouds were formed which stormed and brought forth rain To quicken the Earth and moisten the dry terrian And seeds were sewn and grown and soon grass would shoot As trees would root and began to bear to fruit The land was divided by oceans and great seas Wit rivers that ran like the Nile and Euphrates And fish swam and birds flew thru the skies And animals roamed the plain and they too multiplied As each and every living thing began to sing Giving praise to The King For bringing life and love and peace and harmony, will manifest Than Allah blessed the night, as the sun set in the west As it turned to face the east, giving grace Now you're driftin' thru space [Hook] You're driftin' thru space, driftin' thru space, driftin' thru space Now close your eyes and visualize and realize That we're all driftin' thru space From black dirt Allah created and prostrated the first man and had him Giving the name of Adam Incised out like the fetal position within a mothers womb, still in total submission

To the will of Allah, but he was soon to be awoken
Stretching forth until darkness was broken Than he sat
upright, in the light of truth Sang 'Allah-u-akbar' for his
life is proof That Allah is Merciful, The Most-Benevolent
And Knower-Of-All, for he is All-Intelligent Than he
chose to rise and rose and began to stand tall And
became Kh'liq for over all, the living things, thru-out
the planet Earth And given the keys to this great
universe Than he first realized that Allah had uplifted
him Wit knowledge and wisdom and mentally gifted
him So he bowed his head and seven times he softly
said 'Glory be to my LORD, The Great' and tears were
shed But tears of joy for Adam was more than grateful
Was still alone and without a mate until Woman was
made to compliment the man And co-exist in paradise
when life begin From a single pair, the first trace of the
human race As we drift thru space [Hook] We're driftin'
thru space, driftin' thru space, driftin' thru space Now
close your eyes and visualize and realize That we're all
driftin' thru space
