Forward - be progressive  
The future is in our hands  
Nothing is sacred if technology takes control  
Don't care about logic  
Principles are what you care about  
What's a man life worth?  
That's what you should think about  
It is our fate - our fate

Honour and morality  
They're always victims of progression  
The glamour of our inventions  
Has blinded our eyes to see the essentials

Responsability - thrown away quality  
Replaced by lust and greed for gain  
The human race is inhuman  
Our IQ grows to maximum  
Brains filled with equations  
The High-Tech age controls our lives  
While the spirit rots our feelings die  
It is our fate - our fate

The way into the future is a dead end  
The feeling called humanity gets lost  
We do believe that only science will save us  
And forget that it may kill us

Knowledge and reason could be our rescue  
Stop decay of humanity  
Before technology leads us to death  
Stop decay of our sanity

We're just a part of the machinery  
Stop decay of humanity  
Piece of metal without an identity  
Stop decay of our sanity
