verse 1

Well this is the mysterious case
of Dr.Aden
looking after her patients was her only obligation but
that was back before back before the situation
before she got a visit from an agent
He introduced himself as an employee of the nation
he asked would she'd be willing to offer cooperation
you fit the job description and all the qualifications
if interested i need your signature on this paper
she signed the dotted line without the slightest
hesitation
she then received a letter stating the rules and
regulations and the military bases where she must be
relocated
she is not to discuss any business thats work related

chorus

verse 2

its central America
on a classified location
before border control
before a illegal immigration
inside a lab where
chemicals are manipulated
is where we see Dr.Aden
shes very concentrated
but her concentrations broken
when she hears a conversation
down the halls
small talk about destabilization and
outta curiosity she wanders from her station
inside a unlocked office she did some investigation
she breaks into a file with
top secret information

probably some of the most disturbing documentation
she ever saw in her life
the article simply stated
a study being conducted on human civilization

ch

verse 3

deep down inside she wished it was all her imagination
she couldn't doubt it
cause there it clearly stated
she works in a facility where viruses are created
and not only that
but member when she had her patients
she wrote out prescriptions for what she thought was
medication
her office was really just a part of the operation
she wipes her eyes as they water full of frustration
how a victim of government experimentation
wheres the justification
wheres the justification
wheres the judge when you need him
hes probably on a vacation
probably inside of the same countries that these events
takes place in
but as the puzzle pieces fall into proper arrangement
yes we began to see the intentions of these creations
the patterns of epidemics like
H.I.V. in the 80's
biological chemicals designed to be contagious
there"s nothing in a business of controlling the
population
