he obscure swamps of womb  
multiple embryos are created at impregnation  
still breathing the new born  
motivated by unhuman nature  
consuming all parts of carnivorous species  
cannibalism continues throughout embryonic fetal  
development  
transform in deadly metamorphosis  
strangulated within the putrid bowels  
stillborn embryos eaten alive  
hunger instincts to dead borned  
true evidence of existence  
consumed in gluttony  
cannibalizing another for food in utero
