repulsive infection of mortality shapeless  
unconscious existence ethereal trance of bodily  
formation  
lurid alienation to organic  
substances subconscious experience in uteral void  
vacuum  
of existential volition  
psychotic process of humane transmutation visions of  
absurdity doomed with  
organismal embodiment floating mass of bounded  
flesh  
desperate creation of life,  
nauseating repetition deplorable existence defeaced  
from  
the womb within excremental mess  
to be consumed by putrefaction in the sickening cycle  
morbid grotesquery,  
carved with disfigurement writhing in nihility lost in  
mental estrangement
