Here's another package of information of the Grim and Deadly Ora.

A Fluoride pollution...

First of all, we'll start out with a colored photograph of the label of, 'Sweeney's Sodium Fluoride Cockroach Poison'.

The same high quality Sodium Fluoride that in America you put in Vitamin drops for baby's, when the baby dies you tell it's mother it died from sleeping on it's stomach.

On the same page with the colored photograph of the Sodium Fluoride Cockroach Poison is a little clipping from the 'Wall Street Journal'. 4.26.1990. And it says "You may not like it, but it's true. The Central Nervous System of a human being there are some surprising similarities to that of a cockroach." If it kills a cockroach, it'll kill you too! And it's doing a wonderful job at that.

Now we will discuss 'Hydrofluoric Salicylic Acid'. The first use is to fluoridate the water. It's second use is to remove the hair and the gore from the hides of the slaughter house. Sodium Fluoride is the main ingredient, awk squawk, in Sarin Nerve Gas, this is the product used to fluoridate the water with in the United States. Gives you a nice warm fuzzy feeling, doesn't it?

Hydrofluoric Salicylic Acid is the most corrosive chemical agent known to man. Yet we eat it everyday. If a third world country did this to themselves, you'd laugh at them. OK! Right here, hot off the press, bad bad bad noisy parrots.
