Let Us Move On (feat. Kendrick Lamar)

~~~

Don't wrap it up and go, or hide it behind the sun  
Just give it to me as it is, and let it stand  
Don't fly it like a kite, between the clouds  
It needs no excuse, just bring it down

Let us that are in pain look upon it  
In all it's glory  
Let us move on, let us move on  
This is short and it will pass  
Let us move on, let us move on  
For this is short, and it will pass

Every voice that is lifted, river and some pain  
Show us now, and let love not be chained  
We should feel what we can stop let us be alive  
Show enough, and we've done, now we can

Let us that are frozen get to see  
In all it's glory  
Let us move on, let us move on  
For this is short and it will pass  
Let us move on, let us move on  
For this is short, and it will pass  
And it will pass

And let all that is lost be forgotten, and it will pass  
So let all that is lost be forgotten, let us move on

Like the waters and the open sea  
With tribulations come over you say yes hopefully  
And yesterday you could probably say there's no hope  
for me  
But today I'm overly dedicated  
I'm posting via testimony for broken hearts in the city  
You're either crash-landing or planning on flying with  
me  
Misery love standing behind his company

Well, vividly I could see that your feelings would like to dwell  
On our past encounters, reaching over the counter  
Told me that it's appealing to pop a pill less or down now  
I heard emotions burn deep  
I heard when you fall out of love, the drop is deep  
I heard when you see a thug that's what you try to be  
Git these burdens under my wings but I'm still free  
Cause I can make the decision to let it all go away  
Before I ever run astray, I looked you in the eye and say

Let us move on, let us move on  
For this is short and it will pass  
Let us move on, let us move on  
For this is short, and it will pass

Let us move on, let us move on  
For this is short and it will pass  
Let us move on, let us move on  
For this is short, and in the past  
And in the past
