(music by k.crooker/lyrics by a.calder)

off guatamala, it was early morning off a calm sea  
when over the coil of rope that was my couch  
on one side I saw the start of a fiery red sunrise  
and on the other was the moon like a silver coin  
of the whole trip, this impressed me most of all  
it left me with a lasting sensation of the solar system  
the simplest forms in space are the circle and the  
sphere  
the basis of everything for me is the universe

I think best in wire (4x)

spheres of different sizes, densities, and colors  
floating in space, traversing clouds  
sprays of water, currents of air  
viscosities and odors of the greatest variety and  
disparity

I think best in wire  
vectors representing motion  
velocity acceleration  
by the slightest opposition  
not extractions, but abstractions  
I think best in wire  
vectors representing motion  
I think best in wire  
velocity acceleration  
I think best in wire  
by the slightest opposition  
I think best in wire  
not extractions, but abstractions  
I think best in wire (3x)
