From our mouths comes fire  
The last star has fallen to earth  
The sun has turned black

The sky is painted in shadow  
The animals lay rotting  
All life is dead

At the end  
The end of earth  
The final breath of life  
Has faded

Locust storm like thunder  
Our sea turns to poison  
Fire eats the earth

The rivers run dry  
The cry of mankind roars  
As it slips into the abyss

At the end  
The end of earth

The final breath of life  
Has faded

Crossed over into shadow  
Where evil never sleeps  
It lurks, waiting

The final cold twist of a knife  
A rope around your neck  
A betrayal  
The final splinter through your heart  
The return to beyond

At the end
