(x2)

I shine bright and shed light from afar
93 million miles to be explicit
8 light minutes if you're planning a visit
See I'm the big daddy and this is his system
My turn to burn so keep on listening
I give light when all around is dark
Your choice get sparked or mark my remarks
See ice couldn't hold me back
I fall through forty feet in one minute flat
Meet a solar controller, 'cause that what I was meant to
be
'Cause I was a mystery
Decade is null
Decade is null!
(It's hot, it's hot, it's very hot)

(It's bright, it's bright, it's very bright)

Decade is null, decade is null, decade is null
Check it out while I burn your skull

Decade is null
Hold and praise your nearest superstar
I shine bright and shed light from afar
93 million miles to be explicit
8 light minutes if you're planning a visit
See I'm the big daddy and this is his system
My turn to burn so keep on listening
I give light when all around is dark
Your choice get sparked or mark my remarks
Decade is null, decade is null, decade is null
Check it out while I burn your skull

Decade is null, decade is null
>From one to all, hear this poem and
Try to understand the greatest power known to man
Am I a nuclear bomb, I'm that I make you look like a
firecracker
Alpha and Omega, beginning and end
How can you claim I ain't God, my friend
My atomic magnitude is explosive

I could keep a planet in motion or roast it!
Decade is null, decade is null, decade is null
Check it out while I burn your skull

I emit energy, over all wavelengths
>From x-rays to radio waves
Being the most dominant body of the Solar System
I am the Earth Star

Hold and praise your nearest superstar

I shine bright and shed light from afar

93 million miles to be explicit
8 light minutes if you're planning a visit

See I'm the big daddy and this is his system

My turn to burn so keep on listening

I give light when all around is dark
Your choice get sparked or mark my remarks

See ice couldn't hold me back

I fall through forty feet in one minute flat

Meet a solar controller, 'cause that what I was meant to
be

'Cause I was a mystery

Chain of carbon-nitrogen
Witness the power of chains

Everything dies in fiery heat
Everything dies in fiery heat

Everything dies in fiery heat
Everything dies in fiery heat... of the sun
I emit energy, over all wavelengths
>From x-rays to radio waves
Being the most dominant body of the Solar System
I am the Earth Star
