"C.H.S. Chronic Hyperglycemia Syndrome (Diabetes Melittus)"

Visit "[C.H.S. Chronic Hyperglycemia Syndrome \(Diabetes Melittus\)](#)" on MotoLyrics.com

It's characterized by the presence of a great quantity of glucose on blood ,causing excessive elimination of it through the urine.It happens mostly because of disturbance of the saccharide's metabolism which makes the diabetic organism be unable to use these substances.It's because of the pancreas, which doesn't produce enough insulin.If the hyperglycemia gets extended, it will occur discompensation of the pancreas, which is reversible at the very beginning, but if the extension of the phenomenon is enough, it becomes definitive.
