"Far From The End Of The World"

Visit "[Far From The End Of The World](#)" on MotoLyrics.com

Long way to starlight,
Only a few on this flight
Magnetic dreamers of the way to somewhere
Close to a soul of fire!

Behind Venus, beyond Jupiter,
There s a planet for the future to explore
Such a magic place
To save the human race
Far from the end of the world!

Pulled into darkness
I thought my life was over
But then I saw the crystal window
And my heart was ready to fly
Yeah!

I found a passageway deep in a black hole
Abandoned galaxy of time for us to know

Through a different void outside of our creation
Lies the city of sun

From the belt of the Orion
I could see Earth dying
Into the cosmic wave
I felt its weightless pain
It was our destiny,
The chosen ones to be
Far from the end of the world!

We were close to the Gemini
When explosions shook the sky
I looked away to shield my eyes and hide the shame
Shaping the universe
Another sun gives birth
Far from the end of the world!
