[lyrics: Cyklo, music: Hary]

Somatic temperature drops in death agony  
Post mortem cold - algor mortis  
First on cadaver cool face and limbs  
Coldness of fore arms, middle legs, thighs,

Axillae, bosom and genitals  
Dank epidermis is frigid - perspiring corpse  
Trianguloid drying of conjunctiva  
Cataract of cornea, dry lips  
Consecutive wrinkling of anus and labia  
Lungs affixed on diaphragm and pericardium  
Blood not contains oxygen  
Increase of plasma, post mortem pallor

Corpse's buttock - livores mortis  
Sanguine internal organs - hypostases

Diffusion of bile and flatuses  
Black colour of abdominal aorta

Rigidity of muscular fibres - rigor mortis  
Stiffness of masticatory, facial, neck's sinews

Dark red coagulations  
Necrosis pancreatis  
Enzymes in digestive juices  
Post mortem self digestion

Fermentation of innards  
Autolysis of cells and tissues  
Decaying protoplasm  
Ptomains into organism

Beginning of putrescence.
