Life or any function lays in human body?
What's controlling power ruled over people?
Are you simply only biologic machine?
Or the particle of cosmic substance from beyond?

Storms of fear, winds of rage,
Emotional life
What any mind you are protected by
For the existence?
Where is the place in subconscious,
Leading you through?

Bottomless world in the brain,
Timeless question of mankind

You are only weak-will doll,
You are only slave.

Is it possible to penetrate
To the source of life?
On the side of consciousness
Thought is twist
Source - is reality of the life process
Must be found!

From the deathless abyss now light appears
Transform of emotions penetrate through borders
Cognition of the higher substances of existence -
It's a key for the doors to eternal life
