fa da fa fa fa dow
(Dave on lead)
the sun sends rays
travelling through outer space
photons of light
that feed the human race
the solar thrill
that turns on chlorophyll
the nourishing kiss
of photosynthesis
to create this extacy
let's use this recipe
add water to light
an electron takes flight
and oxygen is set free
the result is ATP
that's how plants store energy
real cooking begins
when CO₂ comes in
it's a sugar factory
fa da fa fa fa dow
plants and trees
are the base of a hierarchy
the rest of us too
live off this chemistry
yes even beef
starts off from a leaf
life's secret is this:
photosynthesis
photosynthesis helps to clear
carbon from the atmosphere
it takes co₂ in
releases oxygen
photosynthesis helps to clear
carbon from the atmosphere
it takes co₂ in
releases oxygen
