Baby good night
Baby good night
Baby good night
Baby good night

GD
Baby good night
Should I draw the image of her sleeping
Don't be shy anymore, You're already my girl
Even if it's not clear it's that way to me
You're more than I deserve
You're perfect, Thank you for being by my side baby,
my lady

TOP
(I'll always love you girl)
A ray of light trickles in
Through the cracks of the dim balcony
A perfect silhouette, this calming night's aroma
Is like a coconut scented oil
Just like the day I confessed to you
Do you remember?
I whisper in your ears, Come closer
You're too fine
A freckled crimson strawberry
And I become the whipping cream that wraps around

GD
Know how much I love you beautiful girl
Like a picture of a child to me
And frozen before a shadow
There's nothing I can do
With a shaky voice
With dry lips
(Come a step closer to me and tenderly whisper)
The surrounding firelight dances
I always dream of you

Baby good night
Baby good night
Baby good night

Baby good night

Baby good night (Don't wanna say goodbye)
Baby good night (Don't wanna say goodbye)
Baby good night (Don't wanna say goodbye)
Baby good night (Don't wanna say goodbye)

GD

When the darkness of the black night finds us
Those beautiful eyes close and drift off
I sit by your bed
And caress your hair
Looking into your face
I want to convey my love
I wish time would stop like this
You are just so beautiful

TOP

(Hey sweetheart)
That I'd be familiar with everything
Your cute question
It's just beautiful, the great power of love
Our lips redden
Our eyes meet, Yes a bit deeper
You're my beautiful girl
You light the fire in my soul
Refreshing mint, the same hint
Teach me the answer sweet girl
You're my beautiful girl
You light the fire in my soul
Refreshing mint, the same hint
Refreshing mint, hint
The answer is you

Baby good night
Baby good night
Baby good night
Baby good night

Baby good night (Don't wanna say goodbye)
Baby good night (Don't wanna say goodbye)
Baby good night (Don't wanna say goodbye)
Baby good night (Don't wanna say goodbye)
