Every star is shining bright
Outside in the summer night
I'm right here where I wanna be, by your side
You are so close I can feel the heat
So close I can hear you breath
So close and it's all I need in my life
Is it really me,
Is it really you underneath the moon?
When you look at me,
When I look at you
Every dream come true
All I wanna be,
All I wanna see
Only you and me in the universe (in the universe)
All that I ever need,
All that I believe
Only you and me in the universe (in the universe)
You are my shining star in the bed of night
You are the breaking light in the bitter night
In a million years, in a billion dreams
Only you and me
Every star in the velvet sky looking down on you and I
Fireflies light up the smile in your eyes
Is it really me,
Is it really you underneath the moon?
Is it really me,
Is it really you underneath the moon?
When you look at me,
When I look at you
Every dream come true
All I wanna be,
All I wanna see
Only you and me in the universe (in the universe)
All that I ever need,

All that I believe
Only you and me in the universe (in the universe)
You are my shining star in the bed of night
You are the breaking light in the bitter night
In a million years, in a billion dreams
Only you and me (only you and me)
In the universe (in the universe)
All I wanna be,
All I wanna see
Only you and me in the universe (in the universe)
You are my shining star in the bed of night
You are the breaking light in the bitter night
In a million years, in a billion dreams
Only you and me
In the universe.
