In our galaxy

There are billions of stars and planets

And in the universe

There are billions of galaxies

On planet earth

We got thousands of different countries

And in the cause if this

We got thousands of societies

Face the endless universe

Dimensions just compare

How can we think that we are here alone ?

In society

We got millions of frightened people

And these people indeed

Got millions of fantasies

And these fantasies

Are reason and emotions

Of love and hate,

Destruction and philosophy

Scientists together now

Intelligence unite !

Get spaceships ready  
To travel space and time  
In our minds we see  
We need a real solution  
Our intelligence  
Has to come together now.  
When we look around We always find pollution  
'Cause it won't be stopped  
We have to leave somehow  
Greenpeace won't be strong enough  
Don't think that they succeed  
Get ready earth to race towards the grave!  
The apocalypse  
Is ringing at the front door  
There's no way out  
To escape from reality  
And our children won't Inherit golden wonders  
There'll be only trash  
And poison they will see  
Scientists, hey, turn around  
Start technical research  
Get out of here's the only way out now.  
(Observers from outer space:)  
Look over there I hardly can trust my eyes  
What a little nice planet I got in sight

In a region of space we never looked upon

It's rotating and it got day and night

Perhaps we could send out a spaceship

And have a look upon if there is life

Why do you stare at me as if I was mad ?

The possibility is a billion to five

We all know our planet got used up to now

And that we at last have to go

And the reason we look out with our telescopes

Is not only to search for and know.

(Back on earth)

Get on board we'll soon have a lift off

And will ride on our spaceship to the sky

Exactly where we're going I surely cannot say

But it doesn't matter while we're getting high

We are the chosen ones to explore the universe

Leave our families and friends far behind

We're riding space and time. 'Though we might never  
get back

I'm looking forward to what we are gonna find.

Spaceriders, timegliders

That's it what we are

Timegliders, spaceriders

Reach out for the stars

Check ignition and fasten seat-belts

There are only minutes left to say good-bye

Take your dream-pills and let your mind flow

It may be a long long time we're gonna fly

Spaceriders, timegliders

That's it what we are

Timegliders, spaceriders

Reach out for the stars

We are the chosen ones to explore the universe

Leave our families and friends far behind

We're riding space and time. 'Though we might never  
get back

I'm looking forward to what we are gonna find.

Spaceriders, timegliders

That's it what we are

Timegliders, spaceriders

Reach out for the stars

(From outer space again:)

Thank you all you people

Who made it possible for us to fly

To the edge of a galaxy so far away

While our own planet is running dry

Check up the engines we're ready to start

In direction of a ball made of blue

We all find it hard to leave you behind

With our chance of a billion to two

Echoes of far away laughter

Are breaking my heart since we've gone

I try to escape from my sadness

By thinking of future and carrying on

Hey, did you see that old spaceship

That goes in direction where we come from
