Sideways is called horizontal
Up & down - vertical
Criss-cross along the diagonal
There's movement in 3 dimensions
This is very scientific
Look at the butt...pussy strut

Say yawl if you mean skidding
Say pitch - tipping
Say roll - spinning
You'll never understand it
I don't understand it
Look at the butt...pussy strut

Demonstrate how certain random movement
can be plotted on a straight line
If you know an object's special properties,
that can be observed
Now factor in the range of variation
as a function on a curve

With watts we rate the power
With volts - pressure
With amps - quantity
Can't you be more specific
Can't you get more specific
Look at the butt...pussy strut

The 1st law is strict on motion
The 2nd law - resting
The 3rd law - proportion
Can't you get more specific
No I can't get more specific

Look at the butt...pussy strut
